Professional Summary

MCA student with a strong foundation in Python, SQL, HTML, CSS, basic cloud computing, and foundational knowledge of NLP. Hands-on experience developing a hybrid machine learning model for botnet attack detection in IoT environments and building TruthLens, an AI-powered web application for fake news detection using NLP and machine learning. Highly motivated fresher seeking entry-level or internship opportunities in Software Development, Machine Learning, or IT-related roles within a growth-oriented organization.

Education Details

SRM UNIVERSITY

MCA – Computer Applications – CGPA: 8.00

CHENNAI

July 2025 – April 2027 (Appearing)

GITAM UNIVERSITY

B.Sc. – Computer Science with Cognitive Systems – CGPA: 7.43

VISAKHAPATNAM

July 2022 – April 2025

Skills

Python | HTML | CSS | SQL | MS Office Applications | NLP |

Projects

Hybrid ML Model for Botnet Attack Detection: <https://github.com/Chanakya0727/Hybrid-ML-model-for-Botnet-attack-detection-.git>

- Designed and implemented a hybrid machine learning–based botnet detection system to identify malicious activities in Android-based IoT environments using behavioral and network traffic analysis.
- Integrated multiple machine learning models including Random Forest, Decision Tree, SVM, XGBoost, and hybrid combinations to improve detection accuracy and reduce false positives.
- Developed a Flask-based web application with secure user authentication and MySQL database integration for real-time botnet prediction and result management.
- Evaluated system performance using standard metrics such as accuracy, precision, recall, and F1-score, ensuring reliable and scalable botnet attack detection.

TruthLens: AI Powered Fake News Detector: <https://github.com/Chanakya0727/TruthLens.git>

- Built an end-to-end NLP web application that detects fabricated news articles with 98.6% accuracy using a Logistic Regression model trained on a 40,000+ article dataset.
 - Developed a Flask REST API to handle real-time text processing (cleaning, TF-IDF vectorization) and model inference.
 - Designed a responsive, dynamic frontend using HTML/CSS/JS to interact with the API and display real-time confidence scores and predictions cleanly to the user.
-

Certifications

- Data Mining – Coursera
- Foundations of Cybersecurity – Google
